Nayan Kumar

Objective

Computer Engineering student seeking opportunities in robotics to apply programming, electronics, and engineering design skills to develop intelligent robotic systems. Eager to gain hands-on experience with embedded systems, automation, and hardware-software integration while contributing to innovative robotics projects.

Education

Georgia Institute of Technology | Atlanta, GA *August 2026 – Present*
Bachelor of Science in Computer Engineering Expected Graduation, May 2030

Mcintosh High School | Peachtree City, Georgia *August 2022 – December 2026*
GPA 4.519

Skills

Programming Languages: Python, Java, JavaScript, HTML, CSS
Software and Tools: Git, GitHub, Visual Studio Code, Arduino IDE, SolidWorks, Langfuse
Hardware: ESP32, breadboarding, sensor wiring and integration
Technical: AI application development, debugging, data analysis, and technical documentation
Communication: Public speaking, technical communication, team leadership, and mentoring
Languages: English (Native), Hindi(native), Spanish (Novice)

Experience

Code Ninjas| Peachtree City, Georgia *September 2024 – August 2026*
Lead Coding Instructor
Code Ninjas is a youth education organization that teaches programming, game development, and problem-solving through project-based learning.

- *Taught programming concepts and guided hands-on projects for more than 50 students, helping them strengthen their coding and problem-solving skills.*
- *Trained and mentored five new instructors, preparing them to lead lessons and support students independently.*
- *Led coding camps and helped students debug programs, complete projects, and progress through the curriculum.*
- *Recognized as Employee of the Month for instruction, leadership, and student support.*

Huduku AI | Remote *June – August 2026*
Student Intern

- Added clickable source citations to AI-generated responses, allowing users to verify where the information came from.
- Helped develop an AI-generated cybersecurity newsletter that informs companies about potential security threats.
- Integrated Langfuse to track AI requests, review generated responses, and monitor system performance.

Projects

Automatic Tennis-Court Rain Cover| Georgia Tech Create-X *Fall 2026*
Inventor and Designer
Individual project focused on developing an automated system that protects outdoor tennis courts from rain by deploying and retracting a weather-resistant cover.

- Selected for Georgia Tech's CREATE-X Ideas to Prototype program, gaining access to mentorship and resources to develop, test, and improve the design.
- Currently designing the motor, roller, gear, and bearing assembly in SolidWorks to create the project's first functional prototype.
